## AQA B3.2 Transport systems in plants and animals

 LEVEL 126 minutes

26 marks

Q1. The diagram shows a section through a plant leaf.

(a) The cells labelled $\mathbf{X}$ surround a stoma (pore).

Draw a ring around the correct answer to complete the sentence.

Cells $\mathbf{X}$ are called | alveoli. |
| :--- | :--- |
| guard cells. |
| villi. |

(b) Water vapour is lost from leaves. Water loss causes a leaf to lose mass.

The graph shows how the masses of leaves from two plant species, $\mathbf{P}$ and $\mathbf{Q}$, changed over several hours. Both leaves were kept in the same conditions.

(i) What was the mass of the leaf of species $\mathbf{Q}$ at 0 hours? grams
(ii) What was the difference between the mass of the leaf of species $\mathbf{P}$ and the mass of the leaf of species $\mathbf{Q}$ after 5 hours?
grams
(1)
(iii) The leaf of species $\mathbf{Q}$ lost water at a faster rate than the leaf of species $\mathbf{P}$.

Suggest one reason why.
$\qquad$
$\qquad$
(iv) Which weather conditions would cause the greatest rate of loss of mass for both species $\mathbf{P}$ and species $\mathbf{Q}$ ?

Tick $(\checkmark)$ one box in the table.

| Weather conditions |  | Tick ( $\sqrt{ }$ ) |
| :---: | :---: | :---: |
| Still air or wind | Temperature <br> in ${ }^{\circ} \mathrm{C}$ |  |
| Wind | 30 |  |
| Still air | 30 |  |
| Wind | 20 |  |

(c) Draw a ring around the correct answer to complete the sentence.

In very hot, dry conditions, the stomata close.

This is to prevent | anaerobic respiration. |
| :--- | :--- |
| breathing. |
| wilting. |.

Q2. Some students used the apparatus shown in the diagram to measure the rate of water uptake by a plant cutting.

The students set up the apparatus in three different conditions:

- no wind at $15^{\circ} \mathrm{C}$
- no wind at $25^{\circ} \mathrm{C}$
- wind at $25^{\circ} \mathrm{C}$

For each experiment, the students recorded the movement of the air bubble along the scale.
(a) (i) Name the two variables that the students chose to change in these experiments.

1 $\qquad$
2 $\qquad$
(ii) It was important to use the same plant cutting each time to make these experiments fair.

Explain why.
$\qquad$
(b) The graph shows the students' results.

Which line on the graph, $\mathbf{A}, \mathbf{B}$ or $\mathbf{C}$, shows the results for each of the three different experiments?

Write each of the letters A, B or C in the correct boxes in the table.

| Condition | Letter |
| :--- | :---: |
| No wind at $15^{\circ} \mathrm{C}$ |  |
| No wind at $25^{\circ} \mathrm{C}$ |  |
| Wind at $25^{\circ} \mathrm{C}$ |  |

(c) Water is lost from the leaves of the plant cutting.

Name this process.
Draw a ring around one answer.
distillation
respiration
transpiration
(1)
(Total 6 marks)

Q3. Some students used the apparatus shown in the diagram to measure the rate of water uptake by a plant cutting.

The students set up the apparatus in three different conditions:

- no wind at $15^{\circ} \mathrm{C}$
- no wind at $25^{\circ} \mathrm{C}$
- wind at $25^{\circ} \mathrm{C}$

For each experiment, the students recorded the movement of the air bubble along the scale.
(a) (i) Name the two variables the students chose to change in these experiments.

1 $\qquad$
2 $\qquad$
(ii) It was important to use the same plant cutting each time to make these experiments fair.

Explain why.
$\qquad$
$\qquad$
(b) The graph shows the students' results.

Which line on the graph, $\mathbf{A}, \mathbf{B}$ or $\mathbf{C}$, shows the results for each of the three different experiments?

Write each of the letters, $\mathbf{A}, \mathbf{B}$ and $\mathbf{C}$, in the correct boxes in the table.

| Conditions | Letter |
| :---: | :---: |
| No wind at $15^{\circ} \mathrm{C}$ |  |
| No wind at $25^{\circ} \mathrm{C}$ |  |
| Wind at $25^{\circ} \mathrm{C}$ |  |

(c) Water is lost from the leaves of the plant cutting.

Name this process.
Draw a ring around one answer.
distillation
respiration
transpiration

Q4. Plants exchange substances with the environment.
(a) Use words from the box to complete each sentence.

| alveoli | phloem | root hairs | stomata |
| :---: | :---: | :---: | :---: |
| storage organs | villi | xylem |  |

(i) Most water enters a plant through $\qquad$
(ii) The water is transported up the stem to the leaves in the $\qquad$
(iii) Carbon dioxide enters leaves through $\qquad$
(iv) A leaf uses the carbon dioxide to produce sugars.

Sugars are transported to ............................................................... through
the $\qquad$
(b) A student set up the apparatus shown in the diagram.

At the start of the experiment both balances showed a mass of 180.0 g .

The diagram shows the reading on each balance 24 hours later.
(i) Look at the mass shown on each balance.

Calculate the difference between the two masses.
$\qquad$
$\qquad$

(ii) Suggest an explanation for the difference between the two masses.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
