

Evolution Essay

Target: to explain the evidence for evolution

Paragraph 1 - introduce the idea of evolution, stating what it is and listing the different categories of evidence.

Paragraph 2 - state what anatomical comparison is, and how this leads to some evidence for evolution. You will need to explain an example e.g. whales, hooved animals or apes.

Paragraph 3 - state what embryology is and why it supports evolution.

Paragraph 4 - state what the fossil record includes and why this supports evolution

Paragraph 5 - explain what DNA comparison is and why this supports evolution.

Paragraph 6 - explain how species distribution (where species live) supports evolution.

Paragraph 7 - explain an example of evolution that has been observed (seen) by humans.

Paragraph 8 - a summary of the evidence that supports evolution, a conclusion based on your most important arguments.
